Importing project into Eclipse

1) First git clone the repo.

2) In Eclipse go to import projects → existing project

3) Browse files and select the CS2810_Restaurant folder (**not the root of the project folder!**)

4) Once the project is imported go to the build path.

5) Delete the postgres jar (the path for the jar is wrong)

6) Add external jar, and select the postgres jar in the project folder.

The project is now set up in Eclipse
